Cross-beam Area Sensor

Features

- 3-point cross-beam netting method minimizes non-sensing area and increases sensing ability
- Long sensing distance 7m
- 7 models of number of optical axies (4 to 20EA) and optical axis pitch(40,80mm), sensing height(120 to 1,040mm)
- Easy installation by installation mode function
- Built-in interference protection, self-diagnosis function
- High luminance indicators for emitter and receiver to check the status at side, front, and long distance
- Protection structure IP65(IEC structure)

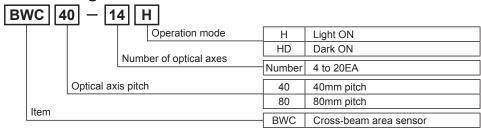

Applications

Screen door for subway flatform and dangerous industry environment

Ordering information

Specifications

Model		BWC40-□□H	BWC40-□□HD	BWC80-14H	BWC80-14HD			
Sensing type		Through-beam type						
Sensin	g distance	1.0 to 7.0m						
Sensin	g target	Opaque material of min. ø	50mm	Opaque material of min. ø9	90mm			
Optical	axispitch	40mm		80mm				
Number	of optical axes	4/10/12/16/18/20EA		14EA				
Sensin	g height	120 to 760mm		1,040mm				
Beam	oattern	3-point cross-beam netting	type					
Power	supply	12-24VDC ±10%(ripple P-	P : max. 10%)					
Reverse	polarity protection	Built-in						
Curren	t consumption	Max. 100mA						
Contro	output	NPN open collector output	·Load voltage: max. 30VDC,	•Load current: Max. 100mA,	•Residual voltage: Max. 1V			
Ор	eration mode	Light ON	Dark ON	Light ON	Dark ON			
Sho	ort-circuit protection	Built-in	•					
Re	sponse	Max. 50ms						
Light s	ource	Infrared LED(850nm modulated light type)						
Synchr	onization type	Timing method by synchronous cable						
Self		Transmitted-received light monitoring, direct light monitoring, output circuit monitoring						
Interfer	ence protection	Interference protection by frequency changing setting						
Environ-	Ambient illumination	Ambient light: Max. 100,000lx						
ment	Ambient temperature	-10 to 55°C, storage: -20 to 60°C						
mont	Ambient humidity	35 to 85%RH, storage: 35 to 85%RH						
Protect		IP65(IEC standard)						
	esistance	The square wave noise by the noise simulator(voltage: ±240V, period: 10ms, pulse width: 1µs)						
	ric strength	1,000VAC 50/60Hz for 1 min.						
	on resistance	Min. 20№ (at 500VDC megger)						
Vibratio	on	10 to 55Hz, amplitude 1.5mm in each of X, Y, Z directions of 2 hours						
Shock		500m/s²(approx. 50G) in each of X, Y, Z directions for 3 times						
Materia	al	Case: Aluminum, Sensing part and indicator: Acrylic						
Cable		ø5, 4-core, 300mm,M12 connector						
Access		Bracket A: 4EA, Bracket B: 4EA, Fixing bolt: 8EA						
Approv		C€						
Unit we	0	Approx. 1.7kg (based on BWC80-14H)						

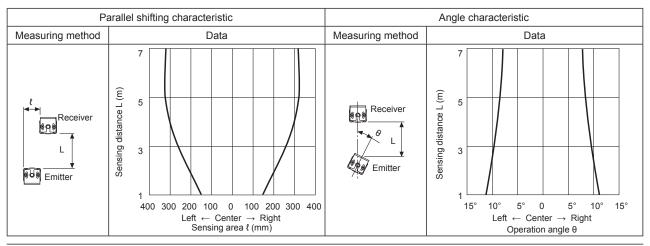

**The temperature or humidity metioned in Environment indicates a non freezing or condensation environment.

Cross-beam Area Sensor

Operation mode

	Light ON	Dark ON		
Receiver	Received light Interrupted light	Received light Interrupted light		
Operation indicator (Green LED)	ON OFF	ON OFF		
Transistor output	ON OFF	ON OFF		

Operation timing diagram

Functions

○ Transmitted light frequency changing function

You can change transmitted light frequency to prevent interference from several units.

To change transmitted light frequency, input 0V to no. 4 terminal (black) MODE (for over 1 sec.) of Emitter during normal operation.

Frequency type is displayed by the frequency indicator.

☼ : ON, ● : OFF

# . OII, # . OII							
Transmitted	Frequency indicator						
light frequency	Green 1	Green 2	Green 3				
Frequency A	≎	•	•				
Frequency B	•	≎	•				
Frequency C	•	•	≎				
Frequency D	≎	•	≎				
Frequency E	≎	≎	≎				

Installation mode function

This function is for stable installation. To enter installation mode, supply the power with inputting 0V to no. 4 terminal (black) MODE of Emitter.

☼ : ON, ● : OFF, ● : Flash

Item	Emitter		Receiver			Control
item	Green	Red	Green	Yellow	Red	output
Normal installation	•	•	≎	•	•	OFF
Hysterisis section	•	•	•	≎	•	OFF
Abnormal installation	•	•	•	•	•	OFF

Self-diagnosis function

If there is malfunction during normal operation by regular self-diagnosis, control output turns OFF and operation indicator displays the state. (Refer to '

Operation indicator DISPLAY')

Diagnosis items

- 1 Break of light emitting element
- ② Break of Emitter
- 3 Break of adjacent emitting elements more than 2EA
- Break of receiver
- ⑤ Emitter failure
- Malfunction of synchronous cable

Installation

For the first installation, enter installation mode.

- ①Entry method for installation mode: Supply the power with inputting 0V to no. 4 terminal (black) MODE of Emitter.
- ②After entering installation mode, install the unit at the position where green LED of receiver operation indicator turns ON.
- 3After installation, re-supply the power to the unit.

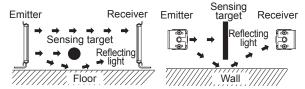

For direction of installation

Emitter Receiver should be installed in same up/down direction.

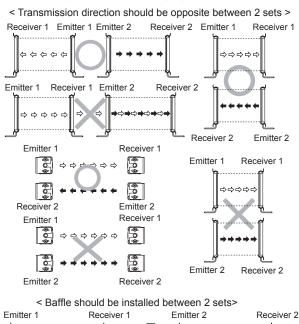

For reflection from the surface of wall-flat

When installing it as below, the light reflected from the surface of wall and flat is not shaded. Please check whether it operates normally or not with a sensing target before using. (interval distance: min. 0.5m)

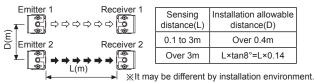

For protection of interference

It may cause interference when installing more than 2 sets of the sensor. In order to avoid the interference of the sensor, please install as following figures and use the transmitted light frequency changing function.

<It should be installed out of the interference distance>

Operation indicator DISPLAY

■ Troubleshooting

Malfunction	Causes	Troubleshooting	
	Power supply	Supply the rated power.	
Non-operation	Cable incorrect connection or disconnection	Check the wiring connection.	
	Out of rated sensing distance	Use it within rated sensing distance.	
Non-operation in	Pollution by dirt of sensor cover	Remove dirt by soft brush or cloth.	
sometimes	Connector connection failure	Check the assembled part of the connector.	
	Out of the rated sensing distance	Use it within the rated sensing distance.	
Control output is OFF even though there is	There is an obstacle to cut off the emitted light between emitter and receiver	Remove the obstacle.	
not a target object.	There is strong electric wave or noise generator such as motor, electric generator, or high voltage line, etc.	Separate the strong electric wave or noise generator.	
Operation indicator displays break of emitter	Break of emitter		
Operation indicator displays break of receiver	Break of receiver	Contact our service center.	
Operation indicator displays break of light emitting elements	Break of light emitting element		
	Emitter failure		
Operation indicator displays emitter failure	Bad wiring connection of synchroous cable in emitter and receiver	Check the wiring connection in emitter and receiver.	
Check the wiring connection in emitter	Control output line is shorted out.	Check the wiring connection.	
and receiver	Over load	Check the rated load capacity.
